Subject: RE: High Low field Mod

Rob,

We reviewed the Lower Passaic River/Newark Bay SV-CWCM planning documents submitted by the CPG. While our comments were addressed, please make the following minor changes to enhance the clarity of the documents:

In the file named 20130405_Attachment1a_ProposedChanges_Rev1.docx, there appears to be a typo in the first paragraph, in the sentence "There are no changes to the minimum ttf flow criterion." CPG should remove extraneous "tt" in front of the word "flow".

The CPG should consistently refer to the "peak signal" that will trigger sampling in Newark Bay as the "predicted peak solids signal," to consistently communicate that it is a predicted/modeled solids response and is not the same as the trigger for Lower Passaic River and Hackensack River sampling (review of the Little Falls hydrograph).

With those we can approve the mod. Thanks,
eugenia

She said it was ok. Just checking on your field mod approval

Thanks
